MOHAMMED UQLA

Gothenburg | 0763451184 | m.uqla6370@gmail.com | github.com/Mouqla | linkedin.com/in/mohammed-uqla-73a7b0171

PROFILE

Ambitious, curious and solution-oriented junior software developer studying Information Technology at Chalmers and available for full-time work. After completing my bachelor's thesis, I am continuing at master's level in High-Performance Computer Systems while working part-time as a Software Developer at Magistera AB. I have hands-on experience in backend and full-stack development, AI/ML, CI/CD and systems programming.
I enjoy understanding user needs, breaking down technical problems and developing reliable solutions from code and data through testing and delivery. I take initiative, work in a structured way and collaborate effectively with both users and developers.

TECHNICAL SKILLS

Programming and backend: Java, Python, C, JavaScript, TypeScript, SQL, Spring Boot, FastAPI, Django, React, JavaFX and REST APIs
Data and AI: PostgreSQL, PostGIS, MongoDB, Pandas, NumPy, Scikit-learn, Random Forest, LLMs, neural networks and model integration
DevOps, systems and networking: Git/GitHub/GitLab, GitLab CI/CD, Docker, Maven, JUnit, Linux, Bash, threads, semaphores, TCP/IP, UDP and routing
Ways of working: Object-oriented programming, requirements analysis, system design, automated testing, troubleshooting, documentation, Agile/Scrum and experience as Scrum Master

SELECTED PROJECTS

AquaSvea Simulation Tool - bachelor's thesis | Grade: 5 (highest grade)

Java / JavaFX / System design / Requirements / Testing / Agile / Scrum
• Together with my team, digitised an external client's Excel-based workflow by developing a standalone simulation tool. Contributed to requirements, implementation, testing and documentation, and coordinated the work as Scrum Master. The project strengthened my ability to understand user needs and deliver tangible business value.

TrainSim - concurrent train control with safe synchronisation

Java 17 / Threads / Binary semaphores / Sensors / Integration testing | **GitHub**
• Developed control logic for two concurrent train threads and protected shared track resources with eight binary semaphores. Implemented sensor-driven switch logic, dynamic track selection and a headless integration test.

Weather forecasting backend service

Python / FastAPI / Scikit-learn / Pandas / Pydantic / Docker / Swagger | **GitHub**
• Built a modular REST service around a Random Forest model with preprocessing, validation, probability outputs, batch processing, API documentation and Docker.

Issue Hamster - software development and CI/CD

Java 17 / Spring Boot / Maven / MongoDB / GitHub API / GitLab CI/CD / JUnit
• Extended an existing application and configured a GitLab pipeline for Maven builds and automated tests. Worked with issues, feature branches, merge requests and code reviews.
Other projects: TikTokii - an ongoing map-based full-stack service using React, Django, PostgreSQL/PostGIS and REST. AI/ML prototypes involving LLMs, neural networks, a database-connected product chatbot and agent-based workflows.

WORK EXPERIENCE

Magistera AB - Software Developer, part-time | Gothenburg | March 2026-Present
• Develop web and logistics solutions in an existing codebase, map technical dependencies, troubleshoot methodically and test changes while protecting existing functionality.
Mathem / Mat.se - Delivery Driver, part-time | Gothenburg | 2020-Present
• Customer contact, independent planning and onboarding new colleagues alongside full-time studies. The role has strengthened my sense of responsibility, communication and ability to stay structured in a fast-paced environment.

EDUCATION

Chalmers University of Technology - Master of Science in Engineering, Information Technology | 2022-Present
Master's programme: High-Performance Computer Systems, MSc
Relevant courses: Applied Machine Learning, Computer Communication, Object-Oriented Programming, Algorithms and Data Structures, Databases, Operating Systems and Parallel Programming

LANGUAGES AND ADDITIONAL INFORMATION

Languages: Swedish and English | **Additional:** Category B driving licence, available for full-time work, willing to relocate
